What each kind of record can establish

The classes preserve meaning; records need not pass through them in sequence

SO: Source observations

26 signals; includes reported labels
Evidence that the recorded event
or report occurred

NO: Normalized observations

2 cross-cutting provenance signals
Keep source, scope and time
when normalizing

DF: Derived features

24 signals; versioned inputs
Window, as-of time and recomputable inputs

MO: Model / risk outputs

2 signals; assessment and version
A score is an assessment, not proof of conduct

CO: Control outcomes

10 signals; decision and authority
Correctness may be unknown;
keep error rates separate

XK: External knowledge

7 signals; external provenance
Observation, assessment or framework

Analytical inference

Conclusions linked to evidence
Confidence, alternatives and uncertainty

Finished intelligence

Released analysis with traceable claims
Independent quality review and human release

The 71 signals occupy five of the seven record classes, plus XK; the last two hold none.
Changing a record’s class does not establish its truth. Mark test/replay records at creation.
