Decisions change what can be observed next

Authorized decision

Allow, block, restrict, hold
Policy, version and reason

→

Changed protection

Complete, delay or prevent
New telemetry and state

→

Observed reports

Source, attribution and time
Correctness may be unknown

Delay

Reports may arrive later.
Preserve arrival and maturity;
freeze decision-time inputs.

Unobservable outcomes

Permanently declined:
no chargeback on that attempt.
Other reports may still arrive.

False reports

Some reports or evidence
can be adversarially authored.
A report can be wrong.

Evaluation: responsibilities 16 and 17

Define the outcome, cohort and assumptions; logs alone do not show what would have happened.
Measure user costs separately; test adaptive attacks and alternatives with the same information.

Test provenance

Emulated/replayed/synthetic records
stay distinguishable from production.
Authorized evaluation use is explicit.

Correction and learning

Quality review and release (21/22).
Lessons: set apart, validate, scope,
version, monitor and withdraw (23).
